OBJECTIVE

Recent Computer Science graduate seeking an entry-level **Software Developer / Full Stack Developer** role, applying strong foundations in **Web Development**, **React**, **JavaScript**, and the **MERN stack** to build scalable, real-time applications, with a focus on clean code, problem-solving, and end-to-end **Frontend** and **Backend Development**.

EDUCATION

Bachelor of Technology in Computer Science Engineering (AI Specialization), Dr. A.P.J. Abdul Kalam Technical University (CGPA: 7.5/10) Expected July 2026

Relevant Coursework: DBMS, Software Engineering, Operating Systems, Algorithms, Artificial Intelligence, Data Structures

Senior Secondary (Grade 12) – Science (PCM), Gateway International School, CBSE Mar 2021 – Apr 2022

TECHNICAL SKILLS

Programming Languages:	JavaScript (ES6+), HTML5, CSS3, Node.js, C++, C
Frontend / Software Development:	React.js, Redux, Responsive Web Design, REST APIs
Backend Development:	Node.js, Express.js, RESTful API Design, Authentication (JWT, Clerk)
Databases:	MongoDB, Mongoose, MySQL
Tools & DevOps:	Git, GitHub, Insomnia
Core Concepts:	OOPS, DBMS, Operating Systems, Agile/SDLC
Soft Skills:	Problem-Solving, Teamwork, Effective Communication, Adaptability

PROJECTS

Talent-TS – Real-Time Coding Interview Platform

Tech: React.js, Node.js, Express.js, MongoDB, Tailwind CSS, TanStack Query, Clerk, Stream, Inngest

- Built a full-stack **MERN** application powering live one-on-one coding interviews with a VS Code-style in-browser editor supporting JavaScript, Python, and Java execution in an isolated sandbox with automated test-case evaluation.
- Engineered secure **authentication** and protected REST APIs using Clerk and Express middleware, with event-driven background workflows via Inngest to sync user data across MongoDB and the Stream platform.
- Integrated real-time **video calling**, screen sharing, session recording, and live chat (reactions, threads, GIFs) using the Stream SDK, with automatic room-locking once two participants join a session.
- Designed a responsive, resizable multi-panel **frontend** with React and Tailwind CSS, and deployed the app with a unified Express server serving the production React build.

Ledger-Based Banking Transaction System (Backend)

Tech: Node.js, Express.js, MongoDB, Mongoose, JWT, bcrypt, Nodemailer

- Designed a secure **backend** system for a banking application implementing double-entry **ledger** accounting, ensuring every fund transfer generates immutable debit/credit ledger entries as the single source of truth for account balances.
- Implemented atomic multi-step money transfers using MongoDB transactions/sessions, idempotency keys to prevent duplicate transfers, and MongoDB aggregation pipelines to compute real-time account balances from ledger history.
- Built **JWT**-based authentication with bcrypt password hashing, protected routes via custom middleware, and a token-blacklisting mechanism (with TTL-indexed MongoDB collections) to securely invalidate sessions on logout.
- Integrated automated transactional email notifications (Gmail API via Nodemailer/OAuth2) for registration and transfer confirmations, and deployed the API to production using Git-based CI/CD deployment.

Real-Time Multiplayer Chess Game

Tech: Node.js, Express.js, Socket.io, Chess.js, EJS

- Built a real-time, two-player chess web app (chess.com-style) using **Socket.io**, auto-pairing connecting players into a room and dynamically assigning White/Black/Spectator roles.
- Used the Chess.js engine for server-side move validation and turn enforcement, broadcasting board state and moves to all clients instantly via WebSockets, with drag-and-drop piece movement on the client.
